COVER PAGE

DIMO 800 - Mercedes-Benz Center of Excellence

The Center - comprising of a showroom, auditorium, café, administration & customer areas, a 93 bay workshop, and spanning over 15,800 m² - is designed, constructed, and operated in accordance with the latest Green Building concepts. It employs green technology such as a highly efficient chiller system, LED lighting, thermally reflective glazing, facade cooling, skylights for harnessing daylight, rain water harvesting, low flow water systems, and drip irrigation for landscape coupled with a system of building management that efficiently controls the A/C, lighting, access, etc. The building design was shown to be over 33% more energy efficient than an ASHRAE compliant baseline building. The Center was certified LEED (Leadership in Energy & Environmental Design) Gold by the US Green Building Council in March 2015, which recognizes best-in-class green building strategies and practices.
